

# WE CAN TAKE YOU TO SCHOOL ON RUST PROTECTION.

## Lesson #2: How InterCoat® ChemGuard protects the most vulnerable part of your bus.

**Engineered to Last:** You can try to solve premature rust by adding more zinc thickness or try different zinc alloy coatings, but nothing compares to InterCoat® ChemGuard, invented by Eco-Green, LLC, in giving you more bang for the buck.

**Experience in the Industry:** With over 3 years of product used in bus production, we're no longer the new kids on the block. InterCoat ChemGuard can protect your floors, or any painted part of the bus.

### High Performance Conversion Coating (HPCC):

Intercoat ChemGuard is leading the way in this new category of coatings. It is an InterReactive® coating that covalently bonds to the zinc and continues to protect for many years. The corrosion inhibiting properties help protect cut edges, holes, cutouts, and scratches or damaged areas.

**Demand the best.  
Demand your new bus has InterCoat ChemGuard.**

*\*Rust is costlier than all other natural disasters combined, amounting to 3 percent of GDP.\**
