

BEAUTY IS MORE THAN SKIN DEEP

**Specify the Intercoat® ChemGuard Floor.
Because rust is ugly and costs you money.**

Arrowhead Steel has pioneered the development of Eco-Green Coating's Intercoat® ChemGuard in the school bus industry, and what we've learned allows us to help solve one of your biggest problems. Rust.

Tests Measure. We've aced them all. Whether it's the ASTM B117 salt spray test, or humidity chamber testing, or real world performance, nothing protects like Intercoat ChemGuard.

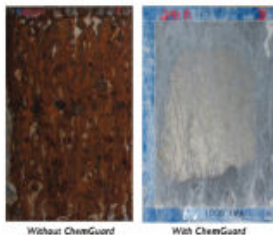

Science Matters. Zinc protects steel, and Intercoat ChemGuard protects zinc through a covalent bond that forms when it comes in contact with galvanized steel. This means it can't be rubbed off the surface since it's now part of the zinc coating. And if

it gets scratched, the self-healing properties of the product means it won't spread rust on the surface.

Math Counts. Longer lasting components means less maintenance and repairs from rust damage. Plus your fleet stays in service and looks better longer. Look at the photos on the right that show the difference in performance when your floors have Intercoat ChemGuard on them.

Market leader IC Bus™ is first in class with their use of Intercoat ChemGuard on all driver platforms on their buses. Plus, they offer an Intercoat ChemGuard floor as an option for added protection against rust.

ASTM B117 Salt Spray
1000 Hours of Exposure

"Rust is costlier than all other natural disasters combined, amounting to 3 percent of GDP."
